SWEET CRUMBS BAKERY

Website Explanation, Features and Development

A responsive bakery website created using HTML and CSS. Project report with the supplied website output and enlarged source-code text.

1. Introduction

Sweet Crumbs Bakery is a visually appealing single-page website designed to introduce a bakery, display its baked products, promote special offers and help visitors find contact details. The design uses warm brown and peach tones, photographs and clear navigation to create a welcoming presentation.

The page contains a home banner, product cards, seasonal promotion, custom-cake enquiry section, photo gallery, contact information and footer. HTML supplies the structure and CSS controls layout, colors, spacing and responsiveness.

2. Objectives

• Create an attractive digital presence for a bakery.

• Present product names, descriptions, photographs and prices clearly.

• Promote a seasonal custom-cake discount and enquiry option.

• Provide navigation links to all major sections.

• Support comfortable viewing on mobile and desktop screens.

3. Main Website Features

Header and navigation

A bakery logo appears with Home, Products, Offers, Gallery and Contact links. Each link navigates to a section ID on the same page.

Hero banner

A welcoming headline, bakery description, call-to-action link and featured cake photograph introduce the website.

Product catalogue

Four product cards present Chocolate Cake (■650), Strawberry Pastry (■100), Choco Chip Cookies (■180) and Birthday Cake (■900).

Seasonal offer

A highlighted banner advertises a sample 15% discount on custom cakes and links to the custom-cake section.

Custom cake enquiries

A dedicated section explains how customers can choose flavors, colors, sizes and designs, then links to contact details.

Photo gallery

A four-column responsive gallery shows cupcakes, cakes, cookies and celebration treats.

Contact and footer

The page includes placeholder bakery address, phone, email, hours and copyright information.

4. HTML Elements Used

Element	Purpose
<header>, <nav>	Website identity and navigation
<section>	Organizes page content
<h1>, <h2>, <h3>	Section and product headings
<p>	Descriptions and details
<img>	Product and gallery photographs
<a>	Internal navigation and enquiries
	Layout containers and product cards
<button>	Product Add to Cart controls
<footer>	Copyright information

5. CSS Styling and Responsive Design

The universal selector resets margins and padding and applies border-box sizing. Flexbox arranges the header and hero content, while CSS Grid creates responsive product and gallery layouts. Rounded corners, subtle shadows and hover transitions improve visual presentation.

Colors and typography

The page uses #fff9f5 as a soft background, #713f36 for dark brown headings and footer, and #a85445 for buttons. Arial provides readable text.

Product grid

repeat(auto-fit, minmax(220px, 1fr)) adjusts the number of product columns automatically according to screen width.

Images

object-fit: cover crops images neatly without distortion; width: 100% makes them fill their containers.

Hover effects

Navigation links change color, buttons darken, and product cards move upward slightly on hover.

Media query

At screen widths of 600px or less, the header centers, the hero heading becomes smaller and sections use narrower padding.

6. Development Process

1. Plan the website sections and navigation structure.
2. Write semantic HTML for the header, hero, products, offers, custom orders, gallery, contact andfooter.
3. Create the CSS theme, reusable button style, cards and image layouts.
4. Add responsive rules for small screens.
5. Test section links, visual spacing and product presentation in the browser.

7. Website Output

The following screenshot was supplied by the project author. It shows the rendered Sweet Crumbs Bakery webpage, including the banner, product catalogue, promotional sections, gallery and contact details.

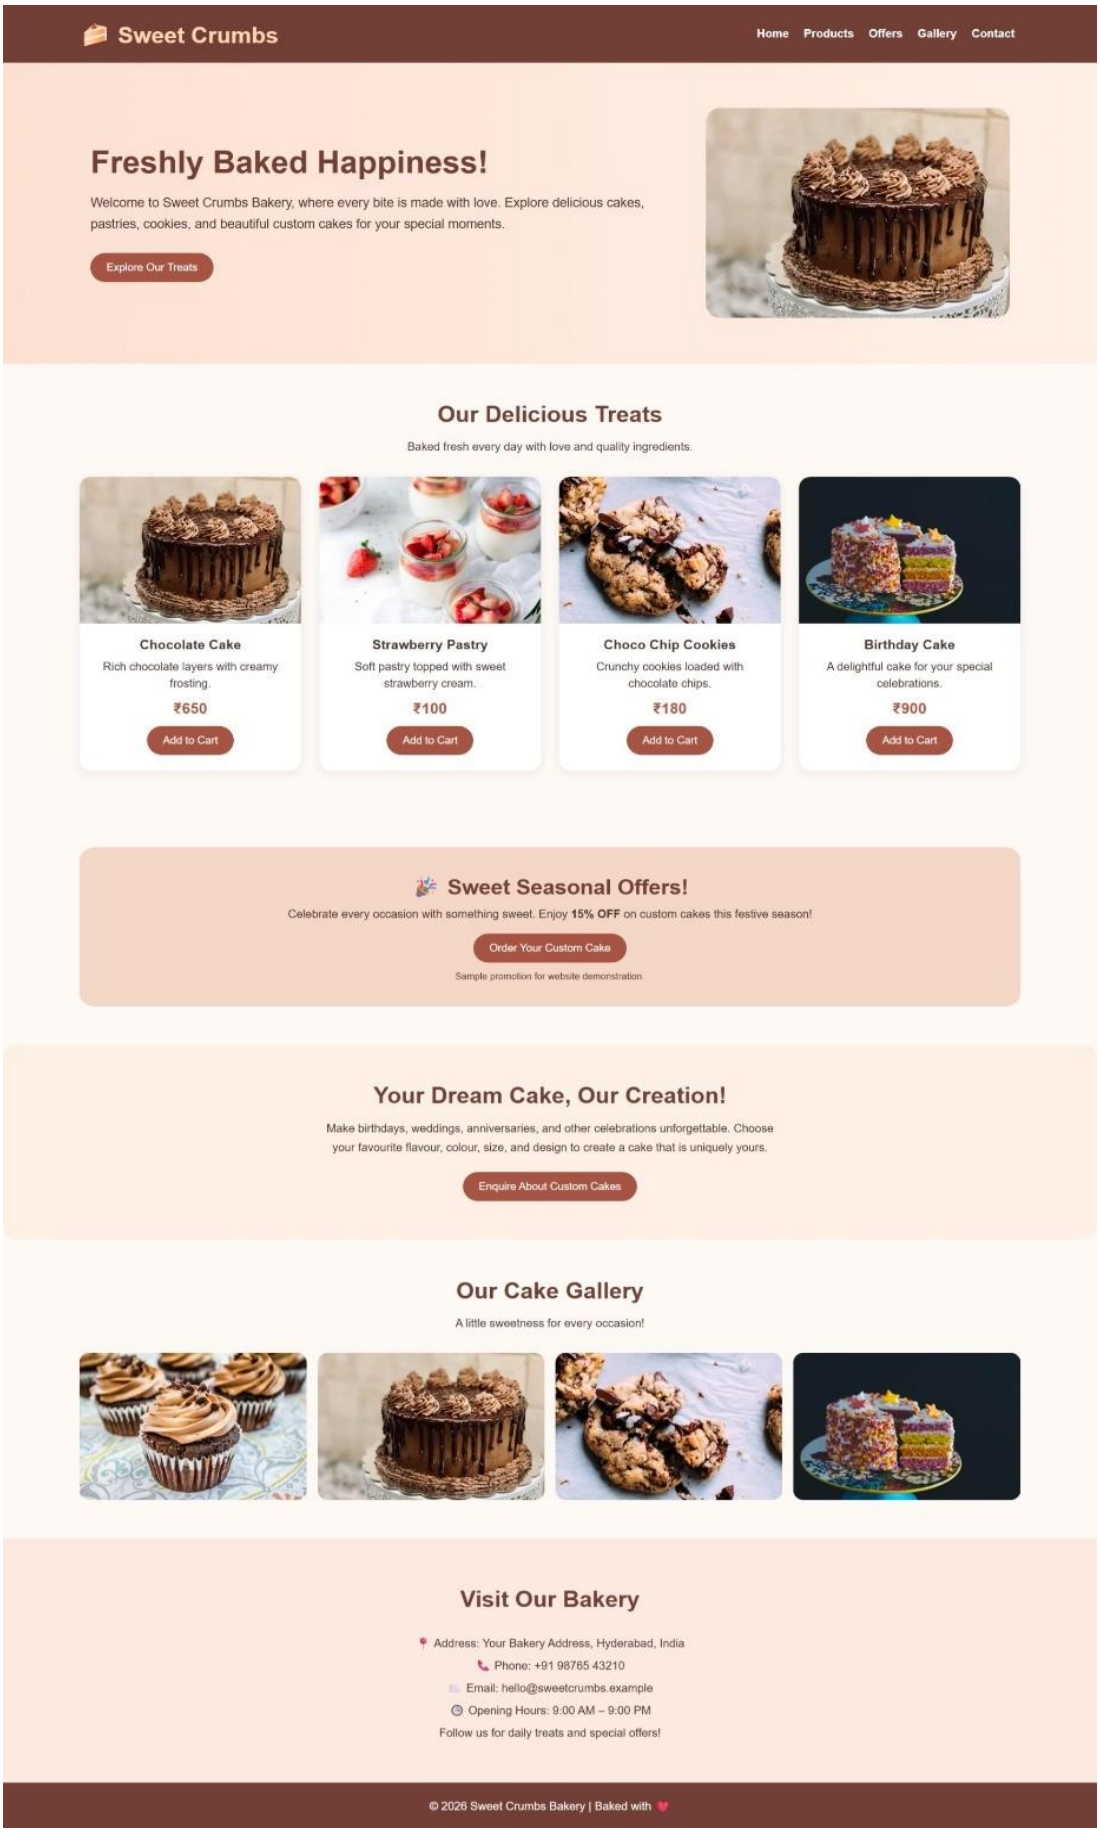

Figure: Sweet Crumbs Bakery website output (user-provided screenshot)

8. Advantages

The website is easy to navigate, visually engaging, lightweight and responsive. Product prices and descriptions are easy to find. The promotional and custom-cake sections make it useful as a small bakery demonstration site.

9. Limitations and Future Improvements

This is a front-end demonstration rather than a complete e-commerce system. Product images are loaded from external URLs, and the contact details are placeholders. A future version could add a persistent cart, online payment, order tracking, enquiry form, admin dashboard and a database.

The supplied original webpage contains a small JavaScript Add to Cart feature. As requested, JavaScript is excluded from the source-code appendix and from the implementation discussion in this report; the visible Add to Cart buttons remain in the HTML.

10. Conclusion

Sweet Crumbs Bakery demonstrates how HTML and CSS can create a polished, responsive promotional website. The combination of structured sections, a flexible grid, attractive product photography and clear navigation supports a straightforward user experience.

11. Complete HTML and CSS Source Code
